5. Recommendations for WEEE Directive Compliance

-In order to avoid the product not meeting the reuse/recovery targets regulated under the WEEE Directive and the regulations of EU countries, the applicant company should, when selecting material and components design, consider they can be easy to reuse and recycle. This consideration will lessen the impact of the required international environmental directives and also improve the product's competitiveness.

-It is recommended that the applicant company, when designing new product, especially where components and materials have a large weight ratio, should consider using recyclable materials in order to increase the product's reuse/recycling/recover ratio.

-The product should apply to the ROHS Directive. (Directive 2002/95/EC on the restriction of the use of certain hazardous substances in electrical and electronics equipment). The hazardous substance specification in the Directive should be controlled in the homogenous material of this product.

-If a product has changed its product design, or materials or components employed, then the product should be reassessed and retested in accordance with WEEE Directive for reuse/recycling/recovery assessment and ROHS for restricted banned substance requirements.
